A Manifesto for Early Career Researchers

There is a wide consensus throughout Europe about the need to further attract and retain the best talent for research.

Indeed, research is the basis upon which present and future generations will be able to conduct the major transitions our societies are embarked on.

This **requires increasing the recognition of the research activity and fostering diversified research careers at a European level, across the public and the private sectors, including NGOs and the third sector.**

By "career" environment we mean the way researchers are recruited, their work assessed, rewarded and eventually disseminated, which employment conditions they are offered and how they, as well as society, can profit from mobility across sectors and countries.
